

# Operations Cost

With the belief that in **the 21<sup>st</sup> century everyone has the right to enjoy modern and high quality Surgery**, we maintain the cost of surgery particularly affordable and low. Options are given for making use of ***contracts with all public insurance funds as well as the private insurance companies.***

An operation on our body is a unique, personal experience. It has to be done **right, once and without complications**. In the era of the international difficult financial crisis, in an effort to save money, a very cheap surgical operation, performed by non-specialist staff, with perhaps an “antiquated” surgical technique and without the required modern, technological equipment, might lead to unpleased, often irreversible, post-operative situations.

Mr Karvounis, by personally performing a remarkably large number of Endocrine Surgery operations annually, in the associated Clinics, has negotiated and achieved ***financial packages in particularly lower cost*** than that of equivalent services in other nursing centres.
